

The future of identity protection is human

Upgrade to biometric identity verification and eliminate the employee password

Identity protection matters in a post-pandemic era where **remote workforces are growing**

230%

increase in password spray attacks during 2020.¹

80%

of security breaches caused by stolen or weak passwords.²

5.8 ^{BIL}

attacker-driven sign-ins detected by Microsoft.¹

Don't let stolen credentials **compromise your business**

How do you ensure the security of remote employees?

Remote employees are accessing company resources on their personal devices and choosing to not use a secure internet connection.

What is it costing your IT department?

Average IT helpdesk labor costs for password resets are expensive and employees frequently reuse variations of old passwords, increasing the risk of identity theft.

What are your security hurdles?

FIDO2, the new standard for secure web login, is not widely understood by board members. IT directors must convince leadership to invest in new authentication methods.

The solution

Build a passwordless, worry-free IT ecosystem with **AuthenTrend + Microsoft Azure AD**

Uncrackable identity protection

Ensure only authorized users can access company data in the cloud or on-premises with secure multifactor authentication that includes fingerprint requirements for low-risk, single sign-on experiences.

Passwordless authentication in <1 second

Replace passwords with portable biometric ATKeys for easy sign-on to Microsoft 365 apps, Azure AD Premium edition, hybrid Azure AD-joined Windows 10 devices, or any web browser.

Best-in-class biometric security

Trust in a highly secure fingerprint security key that stores up to 10 encrypted fingerprints that cannot be disclosed outside the FIDO-compliant hardware chip.

Raise your security standards **today** with

AUTHENTREND

AuthenTrend is recognized as one of the top authentication companies in APAC-2020 by Enterprise Security Magazine.³

IT Directors and CIOs trust AuthenTrend because their fingerprint sensors come with a top industry-level false rejection rate (FRR), smallest form factor, and a FIPS 140-2 compliance solution.⁴

AuthenTrend's ATKey.Pro and ATKey.Card solutions are approved by Microsoft Intelligent Security Association (MISA) and seamlessly integrate with Azure AD.⁴
